

FLY FOKKER

Introduction

You may sometimes ask yourself: "Shouldn't we own the tool we need to carry out this particular maintenance task?"

Fokker Services now has the answer and offers you access to a pool of essential and occasionally-used tools. You no longer have to buy these tools, store them on the shelf, maintain them and calibrate them to standards. This service is designed to support the continued competitive operation of your Fokker aircraft.

Your needs

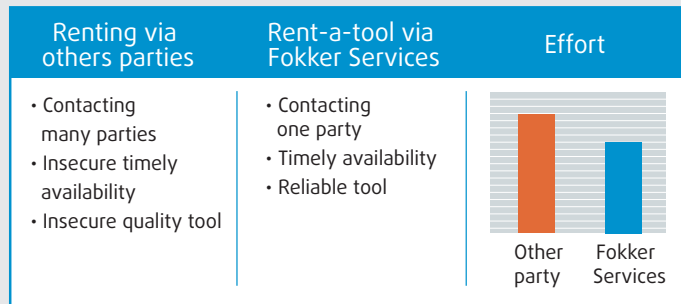

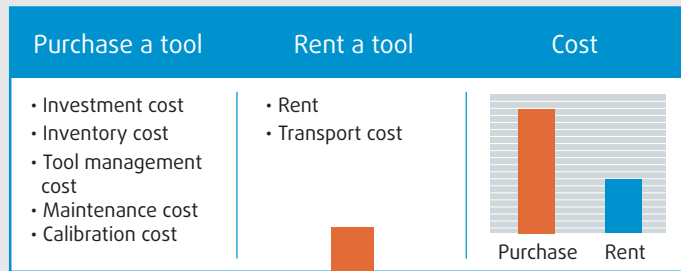

Consider the following situation: you did not initially purchase a tool required for a certain infrequent maintenance task, but you now find yourself in a situation where just such a tool is needed. You can either purchase the tool or make use of our Rent-a-Tool service.

Fokker Services believes that for cost benefit purposes renting a tool on such rare occasions has many benefits. By renting you will avoid or reduce:

- investment cost
- inventory cost
- tool management cost

Until now, no single party offered access to a pool of tools. So searching for tools could be time-consuming because various parties needed to be approached and agreements about tool exchange had to be made.

From now on Fokker Services is your single point of contact for your tool needs. Agreements are standard and therefore do not have to be made separately for each exchange. The tools are tested and calibrated and this makes it possible for Fokker Services to offer a reliable service.

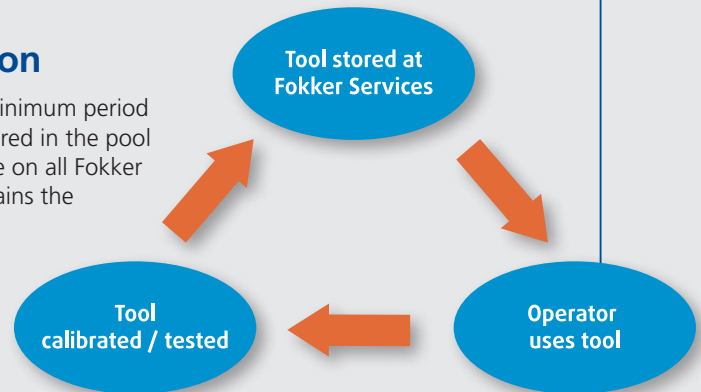

Product description

A tool can be rented for a minimum period of two weeks. The tools offered in the pool can be used for maintenance on all Fokker aircraft types. The pool contains the following tool categories:

- flight control rigging
- structural rigging
- test sets
- hoisting equipment

Fokker Services carefully selects all the tools in the pool. Tools that can significantly reduce maintenance costs are included. A detailed list of all the available tools can be found on MyFokkerFleet.com. The availability and price of a tool can be requested via this site and via our customer service desk.

The Rent-a-Tool service is available ex-works. After each exchange we ensure that the tools are inspected and, if necessary, calibrated and repaired. Therefore Fokker Services always has serviceable tools in storage, and in this way offers a fast and reliable tool exchange service.

FLYFokker for economic sense

Rent-a-Tool is part of FLYFokker, our full-service Life Cycle Support program. FLYFokker comprises four solutions: *Take Off*, *Take Care*, *Take Over* and *Take Next*.

Start-up operators can *Take Off* with their operation in six weeks instead of typically six months. For mature Fokker operators *Take Care* is a complete solution to increase Technical Dispatch Reliability (TDR), reduce Direct Operating Cost (DOC) and improve passenger comfort. Operators moving to other aircraft types are supported by Fokker Services in the *Take Over* of the continued competitive operation of their Fokker fleet. The fourth solution is a package for the mean and lean transfer of aircraft to the next operator, entitled *Take Next*. Using FLYFokker makes economic sense.
