

Communication Intern

The organization

Fokker Services is an independent aviation 'service provider'. We offer tailor-made solutions to regional, commercial and military aircraft. This is how we supply aircraft parts, we offer availability programs for components, we do maintenance and modification programs. We strive to offer our customers only the best from engineering to customer service. At Fokker Services we have a clear focus, i.e. to keep aircraft there where they belong: in the air. Fokker Services employs more than 400 people in the Netherlands, the USA and Singapore.

The internship assignment – Intern Communication at DCMC

Fokker Services is a partner of the Development Center for Maintenance of Composites (DCMC) together with NLR, TUDelft and SPECTO Services. In collaboration with Avans Hogeschool (Breda), DCMC recently conducted a study to improve and further develop DCMC's communication activities. This has led to a number of opinions that have been summarized in reports from the student teams that participated in the study. The purpose of the internship assignment is to further elaborate and implement some of the advice in the DCMC organization. These include the following aspects:

- Developing a concept proposition for potential new partners/members of DCMC;
- Building a communication database of existing and potential partners/members;
- Updating marketing materials, including website and social media;
- Strengthening the relationship with the communication departments of the partners;
- Elaboration and implementing of the proposals to partly convert the DCMC-facility into '*Composites MRO Experience Center*'.

Although the assignment focuses on the communicative aspect, (some) technical knowledge is relevant in order to be able to assess the matter by value.

Location

Location of the internship is preferably the DCMC facility at Aviolanda Business Park in Hoogerheide/Woensdrecht, but there is also the possibility to carry out the internship from Fokker Services, location Hoofddorp, Hoeksteen 40, Hoofddorp. In both cases, there is the possibility to visit the DCMC location in Woensdrecht for the assignment.

Profile

The expected level of the trainee is preferably HBO with a technical course (e.g. aeronautical engineering, mechanical engineering, etc.) or communication (with an interest in technology). A practical 'can-do' approach from the candidates is desirable.

Start of the internship: September 2021 with a duration of 3-4 months (depending on the internship duration)
